

Assignment

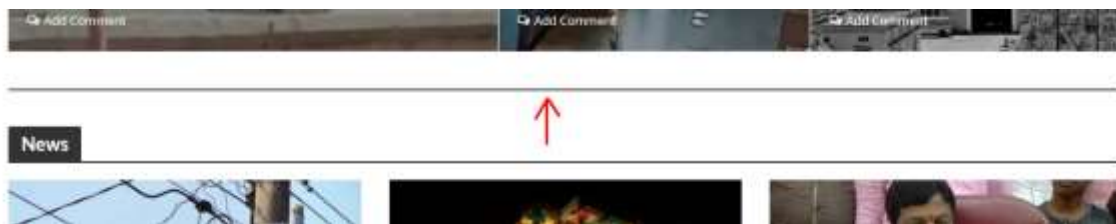

By – Adhikansh Mittal

As I searched on google for the keyword “Hospet News”. The position of hospet.online website after you have clicked is 3rd position.

UI improvements: -

1. <http://hospet.online>

- a) As I visit the website there should be pre loader of at least 5 sec which is containing the logo of the company in the middle.
- b) According to me there should be carousel in the beginning of the main page (carousel should be automated and with 8-9 news pages).
- c) There is no need of the above horizontal line.

- d) The quality of images should be improve.
- e) Now the whole page is divided into 12 columns. I think the page should be divided into 8:4 columns and in new 4 part columns news comment will be fine (on the basis of location or on the basis of topics like sports, politics news etc.)
- f) When we open the website it shows side navigation bar which open on Click function and there is no transition property which is very crucial part for any website.
- g) According to me there is a urge need for changing the navbar because it is not working fine when I check it on iPad.

2. <http://hospet.online/news/>

a) When I click on the option it directly comes on this page I think if there is any slider is there than it will look awesome.

b) Image size and quality should be matched with the font size of the text look below here both are looking mis-matched

NEWS

Hampi heritage site vandalisation – accused fined Rs 70,000 each by court

2 weeks ago Add Comment

HIGHLIGHTS A viral video that showing
vandalism found to be real. Accused were arrested by
the police after a video showing their mindless. Fined
Rs 70,000 each ...

READ MORE

According to me font size of NEWS – 12 px

Heading – 20 px

Details – 16/17 px

And space between the lines should be adjust.

c) The ads block should be less not so big. It only wastes the space on the webpage.

d) There should be some space at the bottom of each page where all can talk to each other and see their comments.

3. <http://hospet.online/hampi-utsav-failed-to-evoke-a-good-response-from-people/#comment-106>

a) This is not showing my comment and no notification through my email is there.

4. <http://hospet.online/buy-sell/>

a) On this page button is not working fine.

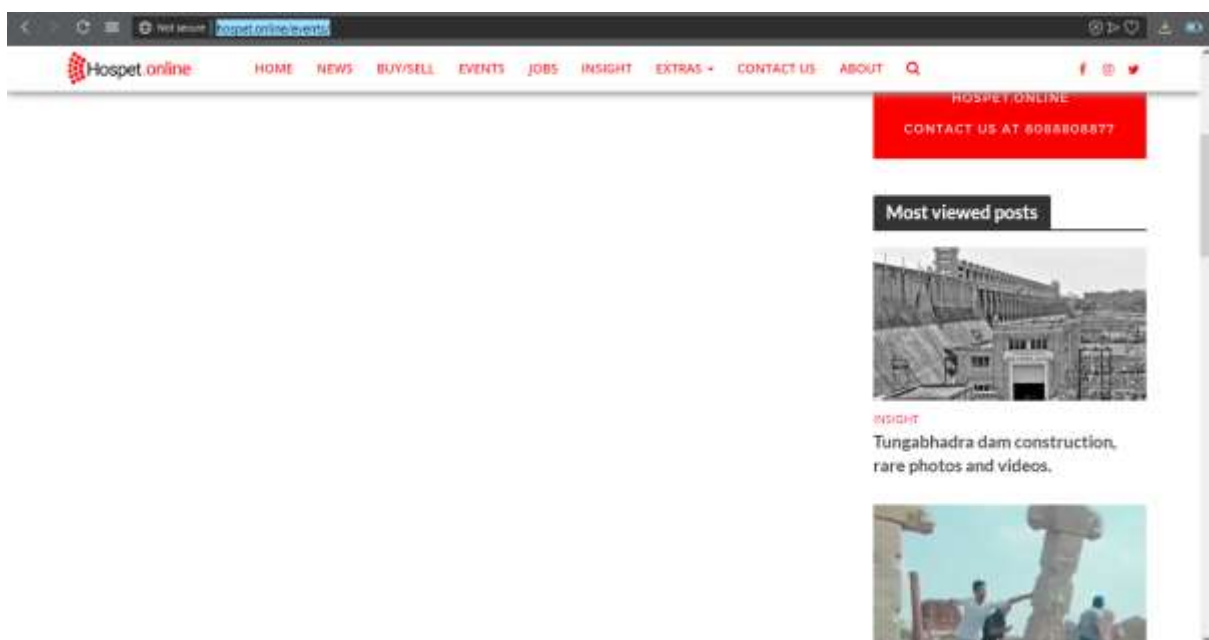

b) Numbering / Indexing should be changed. This is not looking good.

c) Category column is not working correctly.

5. <http://hospet.online/events/>

a) On this page No rule is followed of UI/UX because there is a lot of wastage of page

I think the option of read more should be remove and whole paragraph is there than it will be okay and the image of the news is in 600X300 pixel size.

6. <http://hospet.online/jobs/>

a) Again on this page there is lot of wastage of page. I must say one thing the whole website should be implemented on any framework of JavaScript like Angular Js and React Js.

b) The more the text more is looking more awesome. I mean Font Family and Font size should be adjust.

7. <http://hospet.online/weather/>

a) This page should be come with value as shown on front page

b) The Page should be with slider containing the API of google Weather.

8. <http://hospet.online/contact-us/>

This page is fine.

9. <http://hospet.online/about/>

a) This page is also fine only the little change of hover while add ice cream on the cake.

b)

This should be filled with more details like address, and other branches of your company.

Most Important Points to be mentioned –

- a) The Website should be implemented on any Framework of JavaScript like Angular, React, Vue js etc.
- b) The Website should be responsive.
- c) The Website should be compatible on each and every device.
- d) The Website should use materialize CSS.
- e) The images should be in HD.
- d) The Website should be host on secure connection which have SSL security.
